

# mod\_dptools: set\_global

## About

Sets a global channel variable that all other channels can access. The variable will remain even after the channel which created it has hung up.

## Usage

```
set_global <channel_variable>=<value>
```

This application may be run [inline](#) from the XML dialplan.

## Examples

```
<action application="set_global" data="global_var1=FreeSwitch"/>  
<action application="set_global" data="global_var2=12345678"/>
```
