

# mod\_dptools: send dtmf

---

---

## 0. About

Send DTMF digits from the session using the method(s) configured on the endpoint in use. Use the character w for a .5 second delay and the character W for a 1 second delay.

## 1. Usage

```
send_dtmf <dtmf digits>[@<tone_duration>]
```

## 2. Example

```
<action application="send_dtmf" data="0123456789ABCD*#@100"/>
```

Transmit the digits '0123456789ABCD\*#' each having a duration of 100ms. If no duration is specified the default DTMF length of 2000ms will be used.

## 3. Options

For SIP calls, the digits can be transmitted via inband, RFC2833, or INFO messages. See [Sofia\\_Configuration\\_Files](#) for configuration of DTMF transmission methods in mod\_sofia.

TODO

[RFC 2833](#) is obsoleted by [RFC 4733](#).
